Abstract of the Disclosure

An optically semi-transmission reflection material comprises a resinous film comprising a thermoplastic resin, wherein the sum of total light ray transmittance, T%, and total light ray reflectance, R%, i.e., T + R, is 80 to 100%; an absolute value of their difference is $|(T - R)| < 50\%$; when displayed value a and displayed value b in transmitted light are designated as a_T and b_T, respectively, and when in reflected light, displayed value b is designated as b_R, in the transmitted light, a_T and b_T are in the range of $-2 \leq a_T \leq 2$, and $-2 \leq b_T \leq 1.3$ and the difference between the displayed value b of the transmitted light and the reflected light is $|(b_T - b_R)| < 10$.
